

## **Data & AI Manager**

Dear Hiring Team,

I am writing to express my focused interest in the Data & AI Manager position. With over 24 years of international leadership experience, most recently as a CIO/Transformation Manager, I possess the strategic oversight and technical fluency required to lead your Data & AI vision, driving both operational efficiency and sustainable business growth through advanced analytics and responsible AI adoption.

My career has centered on leveraging technology for business transformation, a concept now deeply interwoven with data and AI strategy. My profile is uniquely positioned to bridge the gap between executive strategy and technical execution, evidenced by my proven expertise in AI & Automation Enablement (RPA, BI) and my current, dedicated training in AI (Python, Machine Learning). I understand that scaling the data and AI function requires more than just technical execution; it demands executive partnership, governance, and a culture of data literacy.

My background aligns directly with the Strategic Leadership and Delivery mandates of this role:

- **Strategic & Transformation Leadership:** As a Transformation Manager, I specialized in aligning technology roadmaps across Mauritius, Europe, Africa, and APAC. I have driven organizational change and governed high-impact, cross-regional programs, ensuring technology investments yield high-impact outcomes. This experience is essential for partnering with stakeholders to define and execute your enterprise Data & AI strategy.
- **Data & AI Delivery Oversight:** I have comprehensive experience overseeing enterprise platforms (e.g., SAP, Zoho, Salesforce) and managing the data lifecycle from ingestion to actionable insight. My expertise in Cloud & Infrastructure (Azure, Google Cloud) provides the foundational knowledge necessary to lead the development of scalable data pipelines and modern data platforms required for BI, analytics, and AI/ML initiatives.
- **Governance, Quality & Security:** I have led large-scale compliance efforts, including GDPR and CNIL implementation and the achievement of ISO 27001 certification. This demonstrates a deep commitment to governance, quality, and security—critical prerequisites for responsible AI deployment and effective data privacy and model governance.
- **Team Leadership & Collaboration:** I possess a strong track record of building and managing multidisciplinary teams, scaling human capital up to 300 IT staff across multiple countries. I excel at leading change management, training teams, and fostering a customer-centric, data-driven culture across business units.

I am eager to leverage my strategic planning expertise, my background in BI enablement, and my focus on emerging AI technologies to integrate advanced solutions (like GenAI and predictive models) into your core business processes, transforming data into competitive advantage.

Thank you for your consideration. I look forward to discussing how my blend of executive strategy and technical oversight can immediately accelerate your Data & AI transformation journey.

Sincerely,

Jimmy Mungur
